You are invited to participate in the 2022 Waste to Worth Conference (W2W2022) and to consider presenting on a topic that is important to sustainability in animal agriculture.

Sponsored by the Livestock & Poultry Environmental Learning Community—a national network of agricultural professionals and practitioners advancing manure management and minimizing the environmental impacts of livestock and poultry operations—Waste to Worth conferences emphasize applied content and are focused on solutions.

“Waste to Worth is focused and applied, not your typical academic conference. It allows for sharing and networking, which expands impact beyond my reach.”

This is an open call for proposals to deliver an oral or poster presentation, or to coordinate a workshop, panel or other professional development activity at the conference.

Proposal Submissions
W2W2022 welcomes oral, poster, panel, and workshop presentation proposals focused on applied solutions related to animal manure management and protecting the environment. Submissions should align with one or more of the general topics listed. Graduate students are encouraged to submit and participate in a poster presentation competition. Proposal submissions due October 15, 2021.

To submit an abstract, go to: lpelc.org/w2w-abstracts/

Who attends?
• Extension agents & specialists
• Progressive farmers & producers
• NRCS staff
• Consultants & technical experts
• Regulatory & policy advisors
• Scientists
• Technology providers

Areas of Emphasis
• Manure Storage, Treatment, Handling & Application Systems
• Air Quality & Emissions
• Water Quality
• Environmental Impacts of Animal Systems
• Manure & Soil Health
• Emerging Contaminants
• Robotics & Artificial Intelligence in Animal Production Systems
• Value-Added Products from Agricultural Wastes
• Climate Impacts & Adaptation
• Feed & Nutrient Management
• Environmental Planning & Regulations in Animal Agriculture
• Educational Programming & Delivery
• Case Studies/On-farm Experience
• Virtual Tours/Virtual Programming
• Mortality Management
• New & Innovative Technology

Advancing Sustainability in Animal Agriculture
April 18 - 22, 2022
